About

Software Engineer with 3+ years of experience in IAM, working on customer-critical backend systems and improving reliability and correctness. Strong in Java-based backend development, REST services, and validation frameworks, with hands-on experience debugging distributed data flows across Redis, DFS, and relational databases. Experienced in building and supporting platform-level identity integrations with Azure AD and Microsoft Graph APIs.

Work Experience

- Zoho** 06/2023 – present
Member Technical Staff
 - **Accelerated bulk user import throughput by 67%** (30 to 10 minutes for 10,000 users) by consolidating DB-dependent attribute checks into grouped service-layer operations.
 - **Debugged and enhanced backend workflows** in a multi-tenant IAM system, handling high-volume imports with strict correctness using Redis, DFS, and relational databases.
 - **Added structured logging** and validation checkpoints to backend modules, improving visibility into failures and data inconsistencies during production issues.
 - **Supported IAM migration** efforts by implementing and stabilizing backend validation and template logic for core directory entities, ensuring correctness and SaaS-ready behavior across Redis, DFS, and database layers.
 - **Analyzed Microsoft Graph APIs** and delivered integration mappings to enable Azure AD provisioning and cloud identity workflows.
 - **Reviewed peer code** changes and contributed suggestions to improve performance, with a focus on correctness and debuggability.
- Zoho** 08/2022 – 05/2023
Project Trainee
 - Improved UI flows, validation logic, and backend handlers across user management and reporting modules.
 - Built a proof-of-concept Ember addon to modularize a large on-prem module, resolving complex build and integration issues.
- Zoho** 04/2022 – 06/2022
Developer Intern

Redesigned a CLI app into a Tomcat web application with SQL-backed persistence and OTP-based authentication.

Technical Skills

- **Languages:** Java, Python, C++, JavaScript
- **Backend/Frameworks:** Django REST, Spring Boot, Microservices, REST APIs, OAuth2, JWT
- **Frontend & UI:** React, Vite, Tailwind CSS, HTML, CSS, JavaScript, Ember.js
- **Databases:** PostgreSQL, MySQL, Redis, DFS
- **Other:** Algorithms & Data Structures, Docker, ML (TensorFlow, Keras)

Projects

- Voluntra - A NGO Management Platform** 08/2025 – Present
 - Architected and deployed a decoupled **Django REST + PostgreSQL** backend powering a multi-role platform (NGO, Volunteer, Corporate).
 - Engineered **RBAC** within DRF ViewSets, including scoped query filtering to enforce strict data isolation across roles.
 - Built end-to-end authentication using **JWT (Djoser + Simple JWT)** with Axios interceptor-based session handling in a React/Vite frontend.
- Deep Learning Based Brain Tumor Stratification App** 01/2023 – 03/2023
 - Developed a CNN-based Android app to classify MRI brain scans into 4 tumor types.
 - Achieved 92% accuracy with TensorFlow/Keras using optimized CNN architecture.
 - Deployed via TensorFlow Lite for real-time, on-device predictions.
 - Built a user-friendly UI, reducing manual diagnosis time.

Education

- Sri Sai Ram Engineering College** 06/2019 – 04/2023
B.E-Instrumentation and Control Engineering
CGPA: 9.28 | **Department Rank Holder** | IEEE Robotics Society Chairperson
- Chennai, India
